Dear Sir/Madam,1
Re: Software Engineering Internship

I am applying for a position in the spring software engineering co-op. I am in my fourth year of university at Trinity College Dublin pursuing my Masters in computer science. I am seeking to build my experience, by applying my knowledge and skills in a professional software engineering environment.

From my 3 years studying computer science, I've gained mathematical and analytical skills, as well as a desire to consistently learn and ask questions that I believe would make me a good candidate for this role. The areas I have been most interested in have been back end areas and subjects dealing with data. Within the modules dealing with these subjects, I have consistently achieved a first.

Outside of simply doing coursework, I have been the Competitions Officer at Trinity's Computer Science Society, which involved being in charge of managing and arranging coding competitions, as well as helping out with anything that needed to be done. Through this work, I gained a real understanding and commitment to working as a team to ensure everybody involved is equipped with what they need to produce a quality result within the set deadlines. I believe the values and skills I've learnt as both a student and society committee member would help me contribute positively to both your clients satisfaction and to the HubSpot workplace culture.

I am interested in working at HubSpot because I have a real love for learning, and HubSpot's approach to learning, with 1 on 1 mentoring as well as HubTalks give me a sense that my values and desire to self improve could be thoroughly supported at HubSpot.

I would be truly appreciative of any opportunity that you could give me.
Yours faithfully,
Brendan Jobus
